

# EJS

---

Until now we were serving simple HTML files. Problem with them is that they are static. What if you want to serve data stored in a database? Templating to the rescue. In this course we'll be learning ejs. Although the default template engine of express is Jade, we are choosing ejs due its similarity in syntax with HTML and JavaScript.

You can download ejs extension for Text Editor you are using. For VSCode its 'EJS language support'.

- Following video series covers EJS.
